                                                                                                                                                                                                                                                                                                                                                                                                                                                 polymerases are useful in many recombinant DNA techniques, esp. nucleic acid amplification by PCR, self-sustained sequence replication (SSR) and high temp. DNA sequencing. The absence of 5'-3' nuclease activity may facilitate higher sensitivity allelic discrimination in a combined polymerase ligase chain reaction (PLCR) assay. An enhanced amt. of 5'-3' exonuclease activity may be desirable in enzymes used in homogeneous assays for the amplification and detection of a target nucleic acid sequence. Mutation of the DNA encoding particular regions of the enzymes can be used to prepare a range of recombinant proteins having 5'-3' exonuclease activity to a complete lack of activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Thermostable DNA polymerases with altered 5'-3' exo nuc activity - having conserved regions mutated or deleted, in e.g. PCR, sequencing and detection assays

                                                                                                                                                                                                                                                                                                                                                                                                                                         nucleic acid amplification by PCR, self-sustained sequence replication (SSR) and high temp. DNA sequencing. The absence of 5'-3' nuclease activity may facilitate higher sensitivity allelic discrimination in a combined polymerase ligase chain reaction (PLCR) assay. An enhanced amt. of 5'-3' exonuclease activity may be desirable in enzymes used in homogeneous assays for the amplification and detection of a target nucleic acid sequence. Mutation of the DNA encoding particular regions of the enzymes can be used to prepare a range of recombinant proteins having 5'-3' exonuclease activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence is that of Thermosipho africanus polymerase DNA which has been mutated. The mutation designated pTARG2-203 causes the polymerase enzyme produced to exhibit a different amt. of 5'-3' exonuclease activity than the native enzyme. Thermostable DNA polymerases are useful in many recombinant DNA techniques, esp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Thermostable DNA polymerases with altered 5'-3' exo nuclease activity - having conserved regions mutated or deleted, for use in e.g. PCR, sequencing and detection assays
                                                                                                                                                                                                                                                                                                                                                                                  Sequence 2073 BP; 820 A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 11; Page 59; 185pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       nucleic acid amplification by PCR, self-sustained sequence replication (SSR) and high temp. DNA sequencing. The absence of feplication (SSR) and high temp. DNA sequencing. The absence of 5'-3' nuclease activity may facilitate higher sensitivity allelic discrimination in a combined polymerase ligase chain reaction (PLCR) assay. An enhanced and: of 5'-3' exonuclease activity may be desirable in enzymes used in homogeneous assays for the amplification and detection of a target nucleic acid sequence. Mutation of the DNA encoding particular regions of the enzymes can be used to prepare a range of recombinant proteins having 5'-3' exonuclease activity to a complete lack of activity.
Mutant thermostable DNA polymerase pTAF09
                                                                                                                AAQ24331 standard; DNA;

                                                                                                                                1942 CTTTCAAAGAGAATTGGTCTTAGTGTTTCAGAG 1974
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               detection of a target nucleic acid sequence. Mutation of the DNA encoding particular regions of the enzymes can be used to prepare a range of recombinant proteins having 5'-3' exonuclease activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   polymerases are useful in many recombinant DNA techniques, esp. nucleic acid amplification by PCR, self-sustained sequence replication (SSR) and high temp. DNA sequencing. The absence of 5'-3' nuclease activity may facilitate higher sensitivity allelic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Thermostable DNA polymerases with altered 5'-3' exo nuclease activity - having conserved regions mutated or deleted, for in e.g. PCR, sequencing and detection assays
                                                   AAQ28937 standard; DNA; 2568
                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 2403 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            discrimination in a combined polymerase ligase chain reaction (PLCR) assay. An enhanced amt. of 5'-3' exonuclease activity may be desirable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence is that of Thermosipho africanus polymerase DNA which has been mutated. The mutation designated praprograms the polymerase enzyme produced to exhibit a different amt. of 5′-3′ exonuclease activity than the native enzyme. Thermostable DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 11; Page 59; 185pp; English.

                                                                                                                                                                                                                                                           2110 CTTTCAAAGAGAATTGGTCTTAGTGTTTCAGAG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          in enzymes used in homogeneous assays for the amplification and detection of a target nucleic acid sequence. Mutation of the DNA encoding particular regions of the enzymes can be used to prepare a range of recombinant proteins having 5'-3' exonuclease activity to a complete lack of activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       replication (SSR) and high temp. DNA sequencing. The absence of 5'-3' nuclease activity may facilitate higher sensitivity alleic discrimination in a combined polymerase ligase chain reaction (PICR) assay. An enhanced amt. of 5'-3' exonuclease activity may be desirable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           activity - having conserved regions mutated or deleted, for use in e.g. PCR, sequencing and detection assays {\sf PCR}

                                                                                                                                                                                                                                                                                                                                                                     Percent Similarity:
                                                                                                                                                                                                                        native enzyme. Thermostable DNA polymerases are useful in many recombinant DNA techniques, esp. nucleic acid amplification by PCR, self-sustained sequence replication (SSR) and high temp. DNA sequencing. The absence of 5'-3' nuclease activity may facilitate higher sensitivity allelic discrimination in a combined polymerase ligase chain reaction (PLCR) assay. An enhanced amt. of 5'-3' exonuclease activity may be desirable in enzymes used in homogeneous assays for the amplification and detection of a target nucleic acid sequence. Mutation of the DNA encoding particular regions of the enzymes can be used to prepare a range of recombinant proteins having 5'-3' exonuclease activity to a complete lack of activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  28-SEP-1990;

The polymerase (see AAR23122) has 5'-3' exonuclease activity. Mutation of the codon specifying Gly at position 37 (i.e. GGA) to an Asp codon results in a DNA polymerase which lacks the 5'-3' exonuclease activity. See AAQ23917 for the wild-type Taf Pol I gene and AAQ28937 for another

When specific PCR products of a similar size to the product generated using Tag chromosomal DNA were produced, the PCR fragments were cloned and sequenced. Fragments with sequences which encoded regions of amino acid homology to known thermostable polymerases were identified. The cloned PCR products were used as probes to screen a genomic Southern blot. The full-length Taf coding sequence was then compiled from various clones. See also AAQ23918-Q23961.

measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system

                                                                                                                                                 probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                         Score
